HOW DOES PLUS PEDAL II WORK?

Plus Pedal II is a programmable footswitch that allows you to control your wireless microphone system. It can be used to mute and unmute your microphone, or to switch between two different sensitivities. It can also be used to control other devices, such as a mixer or effects processor, via MIDI messages. Plus Pedal II can be used with any wireless microphone system that has a mute function, or a sensitivity switch, or a MIDI port. Plus Pedal II can be used with any wireless microphone system that has a mute function, or a sensitivity switch, or a MIDI port. Plus Pedal II can be used with any wireless microphone system that has a mute function, or a sensitivity switch, or a MIDI port.
